

Testing Can Uncover Hidden Health Problems In Your Cat

Early detection. Early intervention. Peace of mind.

We may screen for some of the following conditions in determining your cat's health status.

TEETH

Dental exams uncover abnormalities in teeth and the soft tissue of the mouth. Oral disease may indicate secondary health problems.

THYROID

Biochemistry and serum T₄ tests can indicate thyroid disease.

HEART AND LUNGS

Immunoassay tests can detect heartworm infection, which can cause disease in the heart as well as in the lungs.

LIVER

Biochemistry tests can indicate:

- Liver disease
- Cushing's syndrome
- Certain cancers
- Dehydration
- Obstruction of the bile ducts
- Abnormalities resulting from long-term medications

BLOOD

CBC/Hematocrit are used to screen for:

- Anemia (low red blood cells)
- Inflammation
- Infection
- Stress
- Leukemia
- Bleeding problem
- Inability to fight infection
- Hydration status

KIDNEY

Blood and urine tests can indicate:

- Early kidney disease
- Kidney failure
- Infection
- Stones
- Cancer
- Abnormalities resulting from long-term medications

PANCREAS AND INTESTINE

Biochemistry tests can indicate:

- Pancreatitis (inflammation of the pancreas)
- Diabetes mellitus
- Abnormalities resulting from long-term medications
- Cancer

Fecal tests identify parasites that can cause:

- Diarrhea
- Weight loss
- Blood loss
- Infections in humans (zoonosis)

Diseases and conditions listed above represent some of the most common health issues afflicting small animals.
